Where do berries come from?

Baby asked her mother, "How do berries grow?"

Mama asked, "Do you know where berries come from?"

Baby did not know where berries come from.

They walked under the trees to a berry patch.

"The berries come from a berry patch," Mama said.

"But how?" baby asked her mother.

Baby's mother picked a berry. She pinched the berry, and then suddenly popped out (seed).

This is a seed.

The seed falls to the earth.

Then leaves fall onto the seed and cover it.

Then the rain gets the seed wet.

After the seed gets wet it will grow.

The berry's seed always changes.

The stem and root grow from the seed.

The leaves and flowers grow from the stem.

In the summer the flowers bloom.

When the flowers bloom the bees land on the flowers and do their work.

When the flower petals fall, the berries grow from there.

Inside the berry you will find seeds.
